Digital Zone
Passing Year: February, 2021

React JS UI Developer

Digital Zone
Passing Year: March, 2022

Job Experience

Textile Utilized LTD, Front End Developer

Aug 2020 – Sep 2021

- Experience in 1 Year.
- Develop and Analysis Single Page Web Applications.
- Develop Custom Dynamic User Interface for a different sector.
- Testing existing code to find bugs and Issue then resolving them.

Project Experience

Develop Paioner Bank SPA

Develop for EAxpat.io – 21 February 2022

Paioner bank is a single-page transaction web application. I will develop this application using HTML, CSS and Vanilla JavaScript. First, I have to build the structure, then style by CSS; also, I will use CSS Flex-box to complete the UI part. After finishing, the UI part then worked on JavaScript to use arrow function, spread operator, condition, and Dom manipulation. I will face some errors to develop this application. The major error is function repeated error. I will solve this error to write a single function and then just pass the parameters. Call this function in every calculation.

Skills are using: HTML, CSS, CSS Flex-Box, GIT, Vanilla JavaScript

Develop Quiz SPA Application

Develop for Digital Zone – 07 September 2021

QNA Poll is a single-page react web application. I will use HTML for building the structure, and then style it by using CSS. I will use CSS grid and CSS flex-box to achieve a complicated user interface. Then move to the react JS and convert to the react UI component. I will use vanilla JavaScript and ES JavaScript to build this web application. So, In this project, I will face many problems, UI components are missing some time, sometime website pages rendering multiple times. However, I do not lose my motivation. Find all the issues and research to solve all the errors and problems.

Skills are using: HTML, CSS, CSS Flex-Box, GIT, Vanilla JavaScript, React JS

SPA E-commerce Application

Develop For My Freelance Client In UpWork

This project I will build for my previous job. It will show the entire e-commerce Product. Click to add to cart. Calculate cart information like coupon code, tax, shipping cost. Then customer go to checkout page and payment to complete the order. In this project, I have to face too many errors and issue. I will never give up. After one week, I will complete this project and handover my CEO.

Skills are using: HTML, CSS, CSS Flex-Box, CSS Grid, GIT, Vanilla JavaScript, React JS
